

DAY 3

DATE:-03/09/2025

Variables:

It is a place where we store our values, it has names.

*** Rules to declare variable**

-valid variable declaration

a = 2 A = 2 num = 20 NUM1 = 40 Num3 = 50

-incase of two words use underscore

Stuld = 80998

Stu_id = 127

_stu_name = "LOKESH"

-we can declare multiple variables at once

a,b,c = 4,5,6 or x=8; y=3; z=6

*** Invalid Variable Declaration**

-we can't start the variable name with number

-we can't use space and any other special characters apart from underscore

1num=5

stu name = "karthik"

@num\$ = 30

Q: Collect person's data

Name = str

Age = int

Phone number = str

numerical data without calculations we take it in string

Emailid = str

Insta id = str

Address = str

Height = float

Weight = float

Education = str

Work Experience = float

Salary = float

Company Name = str

DOB = str/date

Marital Status = str

Gender = str

Blood Group = str

INPUT AND OUTPUT FUNCTION:

print() - output function

input() - input function

*Incase of taking input from the user if we are not giving any datatype it defaulty considers in str datatype.

```
print(" Hello Good Morning")
name = input("Enter your name:")
age = int(input("Enter your age:")) Hello Good Morning
```

Enter your name:LOKESH

Enter your age:22

```
type(name)
```

str

```
type(age)
```

int

```
a = int(input())
```

```
b = int(input())
```

```
a+b
```

7 7

14

```
print(" Hello Good Morning")
```

```
name = input("Enter your name:")
```

```
age = int(input("Enter your age:"))
```

```
print(name,type(name))
```

```
print(age,type(age))
```

Hello Good Morning

Enter your name:LOKESH

Enter your age:22

OUTPUT:-

LOKESH

22

Write a program to read employee data

emp Id,emp name,emp salary

Expected output format:

Employee ID = 1234

Employee Name = LOKESH

Employee Salary = 55000Rs

```
Employee_ID = int(input("Enter your emp id = "))
```

```
Employee_Name = input("Enter your name = ")
```

```
Employee_Salary = float(input("enter your salary = "))
```

```
print("Method 01")
```

```
    print("Employee ID = ",Employee_ID,"\nEmployee Name =  
",Employee_Name,"\nEmployee Salary = ",Employee_Salary,"Rs")
```

```
Enter your emp id = 1234
```

```
Enter your name = LOKESH
```

```
enter your salary = 55000
```

```
Method 01
```

```
Employee ID = 1234
```

```
Employee Name = LOKESH
```

Employee Salary = 55000.0 Rs

```
print(".format Method")
```

```
print("Employee Id = {}\nEmployee Name = {}\nEmployee Salary\n={}\Rs".format(Employee_ID,Employee_Name,Employee_Salary))\n.format Method
```

Employee Id = 1234

Employee Name = LOKESH

Employee Salary = 55000.0Rs

```
print("f string Print Method")
```

```
print(f"Employee Id = {Employee_ID}\nEmployee\nName = {Employee_Name}\nEmployee Salary =\n{Employee_Salary}Rs")
```

f string Print Method

Employee Id = 1234

Employee Name = LOKESH

Employee Salary = 55000.0Rs

Write a program to read student Id,name and 3 subject marks and display their details

Student ID

Student Name

Sub1 Marks

Sub2 Marks

Sub3 Marks

Total Marks Percentage
